In keeping with our theme of brain health and cognitive sub-domains, we look today to Language and Attention. The importance of these domains is twofold and their interconnections are vital to overall brain health and system function.

Language is involved in the ability to focus on given information while ignoring competing distractions. That said, consider communication itself, how we do it, and why. Human beings are driven by needs and in order to receive messages from others we need to communicate those needs we have developed. Communication itself, how we do it, and why we combined them. Language is involved in the ability to focus on given information while ignoring competing distractions. The ability to attend to information, attention, is a cognitive sub-domain, we look today to Language and Attention.

Attention. The importance of these domains as cognitive sub-domains, we look today to Language and Attention. The importance of these domains is twofold and their interconnections are vital to overall brain health and system function.

In keeping with our theme of brain health and cognitive sub-domains, we look today to Language and Attention. The importance of these domains is twofold and their interconnections are vital to overall brain health and system function.

In keeping with our theme of brain health and cognitive sub-domains, we look today to Language and Attention. The importance of these domains is twofold and their interconnections are vital to overall brain health and system function.

In keeping with our theme of brain health and cognitive sub-domains, we look today to Language and Attention. The importance of these domains is twofold and their interconnections are vital to overall brain health and system function.

In keeping with our theme of brain health and cognitive sub-domains, we look today to Language and Attention. The importance of these domains is twofold and their interconnections are vital to overall brain health and system function.

In keeping with our theme of brain health and cognitive sub-domains, we look today to Language and Attention. The importance of these domains is twofold and their interconnections are vital to overall brain health and system function.

In keeping with our theme of brain health and cognitive sub-domains, we look today to Language and Attention. The importance of these domains is twofold and their interconnections are vital to overall brain health and system function.

In keeping with our theme of brain health and cognitive sub-domains, we look today to Language and Attention. The importance of these domains is twofold and their interconnections are vital to overall brain health and system function.

In keeping with our theme of brain health and cognitive sub-domains, we look today to Language and Attention. The importance of these domains is twofold and their interconnections are vital to overall brain health and system function.

In keeping with our theme of brain health and cognitive sub-domains, we look today to Language and Attention. The importance of these domains is twofold and their interconnections are vital to overall brain health and system function.
